Thanks Kristien. I made edits to the blurbs with the dates discussed at today's meeting.

Ex. 5 - Deliberative Process

Ex. 5 - Deliberative Process Jan is working on blurbs for both of these.

Greenhouse Gas Reporting Rule: Leak Detection Methodology Revisions and Confidentiality Determinations for Petroleum and Natural Gas Systems. This final rule adds new monitoring methods for detecting leaks from oil and gas equipment in the petroleum and natural gas systems source category. The monitoring methods are consistent with the fugitive emissions monitoring methods provided in the recently finalized New Source Performance Standards for the oil and gas industry. This rule also adds emission factors for leaking equipment to be used in conjunction with these monitoring methods to calculate and report greenhouse gas emissions resulting from equipment leaks.

Region 8 - Idalia Perez and OAR - Kristien Knapp THIS IS TBD - Discussions with OMB are still ongoing.

and planning guidance for radiological incidents. PAGs are used as radiation dose guidelines that trigger protective actions during emergency response, such as evacuation or staying indoors. Radiation dose guidelines are largely unchanged from the previous manual published in 1992. This manual reflects the most current radiation effects science on when and how exposure to a radiation release can trigger protective actions and the manual now incorporates software tools not available in 1992. The manual also contains new guidance on drinking water, as well as cleanup and other types of radiological emergencies not addressed in the previous manual such as terrorist attacks.

annual Greenhouse Gas Performance report, which tracks automaker compliance with the national program GHG emissions standards as part of the agency's continuing commitment to provide the public with transparent and timely information. This report presents substantial detail on whether and how individual manufacturers are meeting the GHG emission standards in the 2015 model year - the forth model year of the standards. Overall, this year's GHG report

is a continuing “good news” story. Manufacturers over-complied with the standards, continuing to generate credits.

report does not address compliance or policy, but mainstream media use the report to document formal short-term and long-term trends, especially for fuel economy, and researchers use it to calibrate their models to real world performance. In this year's report, new model year 2015 vehicle fuel economy increased by 0.5 miles per gallon to a record 24.8 miles per gallon, and saw a rise in each vehicle type. Sports utility vehicle sales have risen to a record high 38 percent market share as the vehicle class's fuel economy to a record high.

Method 301 -

Field Validation of Pollutant Measurement Methods from Various Waste Media: Method 301 is used to validate an alternative test method by ensuring it produces accurate measurements. Method 301 also is used to meet a regulatory requirement if there is no validated method.
